Experience

Co-founder, Paper Lantern Labs – Portland, OR June 2024 – May 2026

- Built a full-stack journaling app that limits users to one entry per day (Next.js, TypeScript, Node.js, PostgreSQL), reaching 40 users and 90 entries in live deployment (inkwell)
- Recorded video tutorials on Rust command-line tools, editor setup with Neovim, and a live-streamed web app build, gathering 8,000+ views

Software Engineer, Brightline Consulting – Chicago, IL Jun 2020 – Apr 2023

Healthcare client

- Ported dozens of Ruby report jobs to TypeScript, unifying the codebase and adding Jest test coverage to catch regressions across clinic data feeds
- Built Playwright automations in TypeScript for 25+ regional clinics, extending appointment sync to providers that the standard integrations couldn’t reach

Logistics client

- Implemented live shipment tracking with WebSockets, syncing real-time location overlays with the route map for in-progress deliveries
- Defined TypeScript interfaces for strict type checking of shipment events, route data, and driver records, catching data format errors during development
- Built responsive React components using ag-grid and custom hooks to adjust tables and layouts across mobile, tablet, and desktop breakpoints

Software Engineer Intern, Open Data Lab – Madison, WI Jan 2020 – Mar 2020

- Wrote Python data extraction pipelines using Scrapy and Selenium, transforming scraped data into structured TSV/CSV formats that fit predefined schemas for downstream analysis
- Refactored single-purpose scrapers into a generic, reusable architecture that handles structural differences across public data repositories

Projects

Puzzle game (Godot, C#) - tile tumble Dec 2025

- Developed a gravity-based tile matching system and chain combos to drive core gameplay mechanics

Education

MS Computer Science – Lakeside State University Aug 2018 – May 2020

BA Mathematics – River Valley College Aug 2014 – May 2018

Skills

Languages/frameworks: TypeScript, JavaScript, Python, Rust, C#, React, Next.js, Node.js, PostgreSQL
Testing/tools/infrastructure: Jest, Playwright, REST APIs, Git, Docker, AWS, Godot
AI-assisted development: Claude Code, Neovim
